

Mission 76 Series

Introduction

Mission loudspeakers have always been afforded the highest respect, both in critical listening tests and for its iconic style.

Aiming for perfection in musical performance and in design aesthetic, the new Mission 76 Series is capable of achieving a level of sonic accuracy and realism. Competent and composed throughout an entire spectrum of music genres, the Mission 76 Series offer not only insight and clarity to recordings, but also deliver an embracing sense of musicality.

Cone Dynamics

Mission has constantly been pushing the frontiers of acoustic research further by using the latest advances in polymer technology in producing its own stronger, lighter and faster cone material called 'Parawave' – resulting from years of in-depth research into the properties of Aramid Fibres, which are man-made polymers with exceptional tensile strength that is 5 times stronger than the equivalent weight of steel, and how they can be used to create a cone that exhibits near perfect linear piston motion over its entire frequency range, whilst retaining speed and accuracy.
